

Hochland Natec GmbH and Gold Peg International Pty Ltd are joining forces to form an international group of companies. These two well-known market players draw on many years of experience in high-quality machinery and plant engineering for the industrial food production sector. Their innovative spirit, as well as their willingness to tailor the technology completely according to the customer's needs, make them partners who provide more than just technical infrastructure. Their innovative and customized machinery and plants are key factors in contributing to the value and development of your customers in the food production industry.

OUR GROUP'S RANGE OF SERVICES: TECHNOLOGY FOR THE FINEST

You produce high quality food. We support you with innovative, powerful technology. Hochland Natec GmbH and Gold Peg International Pty Ltd are members of our international group. Both companies are specialists in the development and engineering of machinery and plants for the production, processing and packaging of food. Their individual service ranges complement each other perfectly. This means that you get all the machinery for your production lines from one source.

Our services are globally and comprehensively accessible. At the same time, however, we work with you on an individual level: You are looked after by one contact person, from conception, engineering and manufacturing of a machine or plant, through its commissioning and harmonization, right up to the after-sales service. We accompany you reliably through all the phases of the project. If requested, pre-engineering is possible before the order is placed.

We offer more than just technical infrastructure: A partnership that propels you on your path to success.

natec

High levels of innovative capacity and customer focus characterize **Hochland Natec GmbH**. Its aim is to provide its customers with a technological edge.

GOLD PEG

The name **Gold Peg International Pty Ltd** stands for powerful technology for industrial food production. The focus is on the quality of the food, as well as on plant productivity.

+ WE CAN "DO" FOOD

Food production is in our blood. Our group of companies belongs to Hochland SE, an internationally successful cheese producer.

- » Besides our technical expertise, our direct access to the food industry ensures us know-how in production and technology.
- » A sense of responsibility, product quality, pleasure and nutritional value are at the forefront of food production. We know all the requirements, from hygiene right up to appetizing appearance.
- » If necessary, we can bring in food technologists, for example to create or perfect recipes.

THE AIM OF OUR WORK: YOUR OPTIMUM VALUE CREATION

Our working principle is “bench breaking engineering” or “benchneering”. This means on the one hand that we do not just settle for the technical status quo, rather we are always one step ahead with innovations. On the other hand it means that you set the benchmark for our range of services. Regardless of whether you work for a large international company or are a regional supplier, whether you are expanding, modernizing, or extending your food production, want to cross-enter or start up in it, we will design the best solution according to your requirements and your company's goal.

Customizing, i.e. tailoring our services, machinery and plants to the customer's needs, is standard in our group. We start with your product idea and then adapt the process and plant to it. Because it is only when these three harmonize and run smoothly that production quality and capacity come right and you achieve optimum value creation.

ROI calculations for our customers show: Needs-orientated functionality combined with premium quality pays off.

⊕ WE RELISH A CHALLENGE

The distinct innovative culture within our group of companies characterizes us. Ingenuity, ambition and a passion for excellent machinery are what bind us together.

- » Innovative thinking makes you always one step ahead. Natec, for example, is the technology leader in processed cheese applications such as slices, cubes and shreds, as is Gold Peg in the continuous cooking sector.
- » From a technological point of view, we enable you to develop an edge over the competition, to realize new product ideas and tap into new markets.
- » Industry 4.0 advances automation. We work on the digital cross-linking of machinery and plants for food production.

THE ADVANTAGES OF OUR TECHNOLOGY: SAFETY AND HIGH PRODUCTIVITY

There can be no compromises in the production of high quality food.

The quality has to be right. Thanks to our proximity to the food industry we are familiar with all the requirements concerning quality and hygiene.

Our connection to Hochland provides us with direct access to food technologists. In addition to food safety we place great value on production, staff and equipment safety when designing machinery and plants. Maintenance contracts and preventative servicing preempt downtimes.

This is all reflected in the high productivity of the machinery and plants which are developed, built and looked after by our group. They deliver a quality of product which is consistent and reproducible. They work effectively and convincingly, thanks to their strong, consistent and reliable performance. Their above average high level of availability is impressive.

In figures: An impressive rate of 95 percent overall equipment efficiency can be achieved. Functionality coupled with premium quality pays off.

“Regardless of your company’s situation and your chosen path to success, we will support you with technology and know-how tailored to your requirements. Working with our group of companies brings you, the food producer, the cooperative, inspired and reliable key partner to achieve the sustainable value creation you need.”

⊕ WE BRIDGE THE GAP BETWEEN PEOPLE AND TECHNOLOGY

Smooth cooperation between people and technology is essential for your success in the food production sector. Our motto is: Technology serves people.

- » We take up your goals, as well as the wishes and demands of your staff, and „translate“ them into suitable technical solutions.
- » We accompany the assembly of machinery and plants, train your staff and, where there are problems, provide support by means of speedy trouble shooting and emergency repairs.
