

**DEMONSTRATION RESEARCH SHARING KNOWLEDGE**

## GREENHOUSE HORTICULTURE EDUCATION AND TRAINING PROGRAMME

Since 2013 the Demokwekerij Westland (demonstration nursery) provides Horticultural education days and training programmes.

This is done internationally for: growers, nursery employees, technical suppliers, trainers and researchers who want to be informed about a variety of horticultural themes.

An education/training programme is customised, has a strong interaction between theory and practice and we take your own level of horticultural knowledge and possibilities from your own area or country into account. The Demokwekerij Westland provides these education and training programmes in collaboration with horticultural experts (for cultivation and technology).

The central themes are cultivation, horticultural technology and business administration.

The subjects are:

- Greenhouse and environment
- Growth process of the plant
- Cultivation plan
- Cultivation Methods
- Water
- Fertilization
- Climate
- Heating
- Exposure
- Crop Protection
- Financial management
- Labour
- Marketing
- Product and process quality
- Innovation

The practical sessions complement the given theory, the relevant daily topics are not only theoretically discussed but are also implemented in an actual practical situation in a horticultural setting in the demonstration nursery. This is truly learning by doing. The Demokwekerij Westland also offers excursions to Dutch horticultural companies and technical suppliers.

Do you have any questions, ideas or suggestions? Does this interest you? Is there something we can do for you?

Please contact us at [info@demokwekerij.nl](mailto:info@demokwekerij.nl) or +31 (0)174 385 600
